

**MATH 1300**  
**Weekly-Work Prompts**

All responses are to be uploaded to Canvas for their corresponding weeks. All responses are due the Friday of the week they are assigned.

<b>Due</b>	<b>Prompt</b>
Week 1	Write a few sentences describing what you've liked about the class so far, what you've disliked about the class so far, anything you are looking forward to about the class, and anything you are concerned about moving forward. Also, for each day that we do group work, write down one thing that every member of your group has in common.
Week 2	<b>Please do not complete this weekly work prompt until the Friday.</b> Looking back on the first two weeks of class, what are some suggestions you have to make the lecture portion of class more accessible to you? For example, more individual work time during lecture, less individual work time, slower, make more individuals answer my questions, more use of technology, less use of technology, more examples, etc.
Week 3	<b>Upload this assignment to the Weekly Work 3 location on Canvas.</b> Please write a few words about the exam this week. Just general thoughts.
Week 4	It feels to me that I haven't been able to keep you all engaged as well since the first exam. Why do you think that is? What can I do to regain the level of engagement we had before the exam? Also, write a sentence or two detailing how you feel about me going through the proofs of the derivative rules. Is it helpful to you? Would you prefer I skip it? Etc.
